Item no.....MCK076100000

John Deere Metal Plate 40x60 cm

Two traditional companies join together. It was 1956 when Deere & Company took control over Heinrich Lanz AG. The plate shows the story of the last Lanz tractor Bulldog 4016 to new John Deere models from the series 100 up to 700 (1960 - 1967). This evolution of engineering over the series 10 (310...) up to tractor 3120 (1972) maintained Lanz's high standards of quality and was the foundation of John Deere's great success in Europe.

Lanz Metal Plate 40x60 cm

You see two legends of Lanz Bulldog tractors on this plate: In the upper right, type D 2539 - HR9, 55hp, usually called "Eilbulldog"(fast bulldog). Due to its higher-speed gearbox it was well-suited to use on the roads. It was built between 1936 and 1944. In the middle you see the type D 6520 - HR5, 38hp tractor called "Verkehrsbulldog"(trafficbulldog) from the period 1929 to 1935. It had been requestable with or without a cabin and often it was used to pull circus trailers.
